

Remote Video Calibration Requirements

Reference Video Display for Color Reference:

iPhone or iPad with internet access to play YouTube. Subscribe to my YouTube channel (Home Cinema Guy) to easily access test material. Link to channel <https://www.youtube.com/channel/UCrEJ-tq7eME6OZsKQug0fwA>. **This process works best when the light level is low in the room where the display is located.**

Video Conference Capability:

The ability to share your screen with me remotely greatly aids the process. Facetime is a great tool for this.

Source Device:

(SDR) Ability to play YouTube on display. Roku, Apple TV or Smart TV can serve this purpose.

(SDR Alternative) Ability to play MP4 or JPG test files device. Many Blu-Ray players can do this.

(HDR & Dolby Vision) Source compatible with HDR and Dolby Vision with VUDU or Apple Movies to play Casino Royal scenes or an UHD player with the disc. A 4K Apple TV or Smart TV are good devices for Dolby Vision. Fire TV 4K does not support VUDU with HDR. Projectors do not support Dolby Vision.

Remote Controls:

Factory remotes for your display, receiver and source device will be used in the process to adjust settings. Universal remotes frequently lack access to the setup and option menus needed for this process.

Test Material:

SDR test material can be downloaded from Google Drive link below on your display or played directly from YouTube.

HDR & Dolby Vision test material is Casino Royal movie. It is available on VUDU or an UHD Blu-Ray.
